DAY-17

PAGE NO.:
DATE:

:- Range() & loop in python :-

(#) Range :-

range() is like telling python :

" start from here---
go till there---
move step by step !!

→ it generates a "sequence of integers" used mostly with for loops

Syntax :- range(start, stop, step)

(*) Where :-

- start → where to begin (default 0)
- stop → where to stop (not included)
- step → increment (default 1)

```
For i in range(1, 6):
    print(i)

For i in range(0, 20, 2):
    print(i)
```

Scanned with OKEN Scanner

(#) Countdown :

```
for i in range(10, 0, -1)
    print(i)
```

(#) items = ["pen", "Book", "Laptop"]

```
for i in range(len(items)):
    print(i, items[i])
```

(#) Create years list:

```
years = []
for y in range(2015, 2026):
    years.append(y)
print(years)
```

(#) Clean city name using range:

```
cities = ["mUMbai", "DELhi", "pune"]
for i in range(len(cities)):
    cities[i] = cities[i].strip().title()
print(cities)
```

(#) Extract last 4 digits from IDs:

```
ids = ["EMP-001122", "EMP-550044", "EMP-990011"]
for i in range(len(ids)):
    print(ids[i][-4:])
```

→ o/p
1122
0044
0011
